included in the 70 vaccines kids get before age 7, meaning the whole CDC-recommended vaccine schedule, they would find that each child ends up being injected with the following:

- 600 micrograms of mercury
- Over 13,000 micrograms of aluminum - plus, aluminum helps mercury cross the blood-brain barrier
- Over 200 different chemicals
- Genetically modified and adulterated additives, preservatives, adjuvants, emulsifiers, and stabilizers, including formaldehyde (embalming fluid), monosodium glutamate (MSG), sorbitol, industrial-based dyes, polysorbate 80, alcohol, acetone, and castor oil
- Residuals of peanut oil, latex, lactose, eggs, dairy, antibiotics, genetically modified spike proteins -- the reason for so many severe childhood allergies
- Blood (albumin) and infected cells from African Green monkeys, eagles, dogs, pigs, cows (fetal bovine serum), and cells from human abortions (MRC-5)
- Wild, live viruses from other animals, including deadly circovirus from wild pigs in China, coronavirus (with gain-of-function), etc.

No testing has been done on all vaccine ingredients combined, as a cumulative effect on children's brains, nervous systems, immune systems

The VIC, Vaccine Industrial Complex, the ultimate sick care institute *lead by Pfizer*, is the most powerful "arm" of Big Pharma, by far. No other form of "medicine" has 100 percent immunity from

Top 10 most deadly vaccine ingredients

#1. Monosodium Glutamate - Found in vaccines for Adenovirus, certain flu shots, Vericella (chicken pox), and MMRV -- used as a "preservative" and "stabilizer." MSG is a concentrated salt that can give infants brain damage, and becomes a neurotoxin when injected, even in miniscule amounts, because it bypasses digestion.

#2. Human Serum Albumin - supposedly used to "prevent immunogens from adhering to the injection vial walls."

#3. Madin-Darby Canine Kidney (a dog's cell protein) - in flu shots, to grow flu viruses instead of fertilized hen's eggs.

#4. Human Abortion Cells (MRC5) - unethical procedures are used to manufacture vaccines using cells derived from human fetuses aborted decades ago.

#5. Thimerosal (50% mercury), in flu shots, found at 25,000 times higher than the levels allowed by the EPA in drinking water.

#6. Squalene - found in flu shots.

#7. Embalming fluid - formaldehyde is found in most flu shots and the Anthrax jab.

#8. Polysorbate 80 - found in DTaP, Hep B, most flu shots, and HPV - used as surfactant to increase the solubility of one agent into another. Polysorbate 80 is derived from sorbitol using a chemical reaction, and can cause IBS because it metabolizes very slowly. Health concerns from consuming or injecting polysorbate 80 are linked to cancer (due to ethylene oxide and 1,4 dioxane), skin allergies, developmental toxicity, reproductive toxicity.

#9. African Green Monkey Kidney (vero cells) - harvested from infected, diseased primates - used in polio vaccines to propagate the virus over decades
